

## Nordic digital health innovations

The Embassy of Denmark, Innovation Norway, The Embassy of Iceland and Business Sweden are pleased to invite you to a meeting with some of the most innovative digital health companies in the Nordics.

**Date:** Thursday 8th of February 2018, 14:00 – 17:00

**Location:** Terkko Health Hub, Haartmaninkatu 4, 00290 Helsinki

### You will meet the following innovative Nordic and Baltic Digital Health companies

By clicking the company name, you will be directed to their web pages

#### Robotics & Automation

[Timedico](#) Tempus600 is a turn-key solution to transporting small clinical samples from A to B, without handling. It is a one-touch solution that reduces ToTAT (total turnaround time) dramatically, creating crucial benefits and advantages to the laboratories, departments, the hospital as a whole and of course the patients.

[Diffia](#) Diffia are the makers of Nimble - a mobile clinical app designed for hospital doctors and nurses - providing them with an intelligent tool that saves time and needless effort, so they can focus on what's really important – better health outcomes throughout the patient journey. [www.diffia.com](http://www.diffia.com)"; Also within the other groups.

#### Artificial intelligence & algorithms in the hospital environment

[Lytics](#) Finds unique medical insights with AI tools; focus on chronic disease management; bringing game-changing innovative and cost-efficient solutions to patients.

[Apply IT](#) Computer vision development. Real-time analysis of information applied to customized solutions. Used in 3-dimensional facial muscular corrective therapeutic and in bio-mechatronics microscopy applications. AI can create value - automate and optimize hospital operations; automate diagnostic tests and make them faster and more accurate.

## Real-time availability of information & processes in the care chain

- [Aweria](#) Platform for emergency care. Provides real time availability of information.
- [Bait Partner](#) Innovative real-time solutions: Video and Consultation System for Operating Room; Full Control and Management System for Operating Room
- [Daintel ApS](#) Critical Information System (CIS); a complete software suite for Intensive Care Units (ICU), Anesthesiology Departments and Recovery Units, developed with over 50 ICU specialists. The only PDM with integrated drug dosage protocols, « plug and play » technology to medical devices and the only capable of generating data in very high resolution that can be directly taped into for research projects. Designed for continuous monitoring, collecting and archiving of patient data. More than 10 years of experience with Qualcomm technologies. A best of breed clinical tool which easily integrates to HIS.
- [Doctrin](#) Intelligent digitalization of the patient journey
- [Imatis](#) a GAME CHANGER IN HEALTHCARE, intelligent communication providing:
- ☀ Clinical and Logistics Workflows
  - ☀ securing Patient Safety by Share and Present Information
  - ☀ LightWeight IT increasing productivity;
- Customer obtained HIMSS EMRAM LEVEL 6, by extended us of Imatis products.
- [Sonitor](#) Using proprietary ultrasound technology, Sonitor delivers the precise location of medical devices and people within clinical environments to provide real-time visibility and insights that improve efficiency and quality of care and the patient experience.
